

LAST CLASS:

- HILL CLIMBING
- FITNESS LANDSCAPE

TODAY :

REAL-WORD-LIKE PROBLEMS
(WELL-KNOWN OPT. PROBLEMS)

EXAMPLE #1

KNAPSACK PROBLEM

HIGH LEVEL SPECIFICATION

GIVEN N OBJECTS OF WHICH WE KNOW THE VALUE AND THE WEIGHT.
GIVEN A KNAPSACK WITH A KNOWN CAPACITY.

WHAT IS THE SUBSET OF OBJECTS THAT WE CAN TRANSPORT SO THAT

- THE TOTAL VALUE IS MAX
- THE TOTAL WEIGHT IS \leq CAPACITY

NUMERIC EXAMPLE

WEIGHTS : 23, 31, 29, 44, 53, 38, 63, 85, 89, 82
VALUES : 92, 57, 49, 68, 60, 43, 67, 84, 87, 72
CAPACITY : 165

- WHAT ARE SOLUTIONS (CONCEPT) ?
- WHAT REPRESENTATION FOR SOLUTIONS
- WHAT FITNESS ? 
- WHAT NEIGHBORHOOD ? 

- WHAT ARE SOLUTION ?

DON'T TRY TO SOLVE THE PROBLEM !

A PARTITIONING OF OBJECTS INTO OBJECTS CARRIED IN THE KNAPSACK AND NOT CARRIED

- HOW TO REPRESENT ? (IF POSSIBLE, STRINGS OR VECTORS, ...)

BINARY STRINGS OF LENGTH N (# OF OBJECTS)

WHERE $1 \rightarrow$ OBJECT IN THE KNAPSACK, $0 \rightarrow$ NOT IN THE KNAPSACK

- FITNESS :

if (TOTAL WEIGHT \leq CAPACITY)

then fitness = TOTAL VALUE (ADMISSIBLE SOLUTION)

else

- TOTAL WEIGHT

(NOT ADMISSIBLE)

- NEIGHBORHOOD

NEIGHBORHOOD OF A SOLUTION x CAN USUALLY

BE DEFINED AS :

$$- N(x) = \{ y \mid d(x, y) \leq k \}$$

FOR SOME d AND k

$$- N(x) = \{ y \mid y = op(x) \}$$

op IS AN OPERATOR THAT TRANSFORMS SOLUTIONS

TYPICAL NEIGHBORHOOD FOR BINARY STRINGS : BIT FLIP

op = CHANGES ONE BIT IN THE STRING REPR. OF x

d = HAMMING DISTANCE

$k = 1$

| | | | | | | |
|---|---|---|---|---|---|---|
| 0 | 0 | 0 | 1 | 1 | 0 | 0 |
| 0 | 1 | 0 | 1 | 1 | 0 | 0 |

EXAMPLE #2

TRAVELLING SALESPERSON PROBLEM (TSP)

GIVEN : A SET OF CITIES AND THEIR PAIRWISE DISTANCES
ONE CITY \rightarrow HOME

OBJECTIVE : FIND THE CYCLIC PATH STARTING FROM HOME AND
RETURNING HOME THAT VISITS ALL OTHER CITIES ONCE
WITH THE MINIMUM TOTAL DISTANCE.

- SOLUTIONS ?
- REPRESENTATION
- FITNESS
- NEIGHBORHOOD

NUMERIC EXAMPLE

| | 1 | 2 | 3 | 4 | 5 | |
|---|-----|-----|-----|-----|-----|--|
| 1 | --- | 9 | 7 | 1 | 4 | |
| 2 | --- | --- | 3 | 8 | 2 | |
| 3 | --- | --- | --- | 4 | 1 | |
| 4 | --- | --- | --- | --- | 6 | |
| 5 | --- | --- | --- | --- | --- | |

SOLUTIONS ARE STRINGS OF
 $N+1$ VALUES ($N = \# \text{ CITIES}$)
 WHERE HOME IS IN POSITION 1
 AND $N+1$ AND ALL
 OTHER POSITIONS CONTAIN ALL
 VALUES ONCE

EXAMPLE (HOME = 1)

$x = \underline{1} \quad (3) \quad 5 \quad (4) \quad 2 \quad \underline{1}$

$y = 1 \quad 4 \quad 5 \quad 3 \quad 2 \quad 1$

FITNESS:

$$\begin{aligned} f(x) &= d(1,3) + d(3,5) + d(5,4) \\ &\quad + d(4,2) + d(2,1) = \\ &= 7 + 1 + 6 + 8 + 9 = \underline{\underline{31}} \end{aligned}$$

NEIGHBORHOOD

SWAP OF TWO CITIES

$$\begin{aligned} f(y) &= d(1,4) + d(4,5) + d(5,3) \\ &\quad + d(3,2) + d(2,1) = \\ &= 1 + 6 + 1 + 3 + 9 = \underline{\underline{20}} \end{aligned}$$
